

Peppermint Park Subdivision - Stage 6A

Project Description

Leeuwin Civil were engaged to construct Stage 6A of the Peppermint Park Estate, following the successful completion of the previous subdivision in 2017.

Stage 6A involved construction of retaining walls and kerbed and asphalted roads, in addition to associated stormwater drainage installations.

Other works included sewer reticulation construction and service asset installations for water, power, gas and communications.

Construction was completed above all stakeholder expectations with acknowledgement from the Client, the Client Representative and the Consulting Engineer to this effect.

Scope of Works

- sewer reticulation construction with associated dewatering;
- stormwater drainage construction with associated dewatering;
- road construction with kerbed and asphalted roads;
- service installations including water mains, power and NBN installations; and
- retaining walls construction.
