

PROJECT

Vasse Village Commercial Centre Subdivision - Stage 1B

Project Description

Leeuwin Civil was contracted by Perron Developments and Stawell Developments to construct Stage 1B of the Vasse Village Commercial Centre Subdivision.

This stage of works involved the construction of a link road between the Vasse Bypass and main entrance to the Dawson Estate, and link road around commercial premises within the Estate.

Subdivision works also involved the installation of 225mm and 150mm sewer reticulation and tie-ins to existing assets, which Leeuwin Civil managed with dewatering due to the typically higher ground water levels experienced in the Busselton area.

Leeuwin Civil also installed services including gas, water, power and communications as well as re-routing the existing stormwater drains, which involved the demolition of old assets and construction of new assets and tie-ins.

Scope of Works

- installation of 225mm and 150mm sewer reticulation constructions and tie-in's to existing assets including associated dewatering;
- stormwater demolition, re-routing and construction of new assets;
- service installations i.e. water mains, power, gas and communications (NBN) installations;
- road construction including asphaltting and kerbed roads; and
- all associated reinstatement and landscaping as required.

Location

Busselton, WA

Dates

Nov 2017 - May 2018

Client

Perron Developments & Stawell Developments
